Frontend Engineer

Frontend Engineer with 3+ years of experience building production-grade web applications using React, Next.js, and TypeScript. I focus on designing scalable, maintainable UI architectures and reusable component libraries, with a strong emphasis on performance, accessibility, and responsive design. In recent roles I helped deliver key B2B features (such as a digital signature workflow and contract management platform) by collaborating closely with product, design, and backend teams. I also have hands-on experience with Node.js and PostgreSQL, giving me solid insight into API-driven full-stack development.

WORK EXPERIENCE

Emzano • 05/2025 - Present
Frontend developer **tehran**

- Owned scalable contract-management workflows covering recipient roles, signing order, metadata, and PDF preparation, with a focus on maintainable frontend architecture.
- Reduced redundant API requests by ~40% by architecting TanStack Query caching, invalidation, and server-state management strategies.
- Engineered production-grade document interfaces with search, filtering, pagination, drag-and-drop PDF design, OAuth/SSO, performance optimization, and on-premise application configuration.

looge • 07/2024 - 05/2025
Frontend developer **tehran**

- Architected SSR, SSG, and CSR rendering strategies across the application, reducing initial content delivery time by ~30% and improving SEO for public property pages.
- Optimized Next.js image delivery, asset loading, and frontend performance, reducing page payloads by ~25% and improving Lighthouse performance scores.
- Engineered data-fetching and caching strategies that reduced redundant API requests by ~35%, improving responsiveness across property search, filtering, and navigation workflows.

PROJECTS

FastFactor for Sellers (B2B) • 09/2025 - Present

FastFactor for Sellers — B2B Order Management Platform Architected and built an end-to-end B2B SaaS platform that enables social-commerce sellers to collect and manage customer orders through public checkout links. Designed a modular React/TypeScript frontend and Express/TypeScript backend using layered Controller–Service–Repository architecture, PostgreSQL, Zod validation, and JWT authentication with refresh-token rotation. Implemented secure auth flows, domain-based separation, database migrations, centralized error handling, CI/CD pipelines, and Dockerized local infrastructure with health checks and persistent storage. Deployed the production frontend on Vercel and backend/database on Render, delivering a production-ready full-stack system from architecture and implementation through deployment.

Bilingual Document Q&A (RAG)

- Built a Persian/English document Q&A system with streamed responses, resumable conversations, and page-level citations.
- Engineered an asynchronous FastAPI/Celery pipeline for document ingestion, versioned indexing, and owner-scoped hybrid retrieval with backend-validated citations.
- Evaluated local LLMs on 80 versioned bilingual questions; built a typed frontend with Zod-validated API contracts and resilient SSE handling.
